

BirchSorb.[®] CARGO[®]

Protect Your Coffee Shipments
With BirchSorb[®]

MARKET-LEADING MOISTURE CONTROL

**DON'T LOSE
YOUR CARGO TO
CONTAINER RAIN**

Your Coffee Is at Risk of Mould

All goods are vulnerable to moisture during shipping – but coffee is at even greater risk. Once coffee beans reach a critical moisture level of 12.5% or higher, fungi and mould has the potential to render entire containers of coffee beans unfit for consumption.

Coffee is hygroscopic – it absorbs moisture from the air around it, meaning that even the most carefully designed packaging and container liner isn't always enough to protect your cargo during transit. Choosing the right moisture control is essential.

Introducing BirchSorb Cargo

Market-Leading Moisture Control for the Coffee Industry

BirchSorb Cargo hyperdesiccant is tailored specifically for shipping containers, with a controlled absorption rate capable of handling long shipping routes of up to 12 weeks – whilst absorbing over 200% its own weight in moisture, eliminating any chance of cargo reaching critical moisture levels of 12.5% or above during transit.

Our unique formulation absorbs humidity and chemically locks it away in a solid matrix. Unlike traditional moisture control products, which are often only effective for very short periods of time, BirchSorb features an innovative blend of chemicals designed specifically for long routes and all humidity conditions – making it powerful and long-lasting.

BirchSorb Cargo is available today from our global distribution channels.

Why choose **BirchSorb.**^{CARGO®}

We benefit from our own in-house supply chain, with the raw materials for some of our product range mined from our quarry in the UK. And thanks to the expertise of our in-house chemists and our dedicated Innovation Centre, we're constantly finding new ways to create truly industry-leading products.

Completely Odour-free

BirchSorb leaves no odour or fragrance, preserving the smell of your product.

Can Be Used With Liners

BirchSorb can be used in tandem with other anti-moisture products, such as liners.

Food Contact-approved

BirchSorb is completely safe for contact with coffee and other food or drink products.

Uninterrupted Supply

Thanks to our on-site facilities and global distribution network, BirchSorb is quick and easy to obtain - and we're committed to making sure it always will be.

Without the use of BirchSorb Cargo

Fully protected during transit with BirchSorb Cargo
